

Charging the Crossroads Program Update

The Indiana Department of Transportation (INDOT) is continuing to advance its Charging the Crossroads initiative, a statewide effort to expand electric vehicle (EV) charging infrastructure along Indiana’s interstates and highways.

Building on updated federal guidance released late last year, INDOT is moving forward with the construction of up to 21 DC-fast charging sites across the state. These sites were identified and contingently awarded in 2024. Project development activities are advancing across all awarded sites, and construction is anticipated to begin in the near future as projects complete remaining approvals and requirements. A map of planned locations is available [here](#).

INDOT is partnering with six developers to construct and operate these stations: Love's Alternative Energy, Pilot Company, Red E Charging LLC, Tesla, Universal EV Inc. and Village Pantry, LLC, a subsidiary of ARKO Corp. Together, these partners will play a critical role in expanding access to fast, reliable charging options for drivers traveling throughout Indiana.

Charging the Crossroads remains focused on building a practical, accessible and reliable charging network that supports Indiana’s growing EV market. Additional updates, including timelines for initial installations of charging stations, will be shared as progress continues.
